JASON DAGANA

Full-Stack Software Engineer | React | Next.js | TypeScript | Node.js | Django | PostgreSQL

Abuja, Nigeria | +2349013642811 | daganajason72@gmail.com | portfolio | github | linkedin

PROFESSIONAL SUMMARY

Full-stack engineer with production experience across transportation, media, edTech, and AI products, working with React, Next.js, TypeScript, Node.js, and Django. I work closely with design, backend, and product from early architecture decisions through to release, including a national railway ticketing platform projected to serve close to one million passengers annually.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL
- **Frontend:** React, Next.js, TanStack Query and Table, Zustand, Redux, Tailwind CSS
- **Backend:** Node.js, Express, Django, Celery, Redis, PostgreSQL, MongoDB, REST, Server-Sent Events, JWT and cookie auth
- **Practices:** LLM integration, rate limiting, caching, async job queues, Docker, GitHub Actions CI, Vitest

PROFESSIONAL EXPERIENCE

Full-Stack Engineer 2025 – Present
NewsBridge AI | Early Team Member | newsbridgeai.com

- **Built 40+ backend endpoints** (Django, Celery, Redis, PostgreSQL), including push notifications that alert journalists to incoming citizen reports.
- **Built Language Intelligence:** detects the language of text or audio, translates it into the chosen language, uses an LLM to extract claims, and sends selected claims to the claims-verification module. Translations are saved per user for record, with rate limiting and input caching to prevent LLM abuse and repeat-query costs.
- **Built News Signals:** groups similar reports into signals classed as rising, breaking, or normal, with LLM-generated intelligence (summary, claims, unknowns) that helps journalists develop stories.
- **Contributed to the frontend:** designed the landing pages and dashboards, integrated about 95% of the initial APIs with HTTP-only cookie auth, then built the new dashboard and claims modules and integrated the signals endpoints, extending the auth, webhook, and notification foundations already in place.

Frontend Software Engineer Feb 2025 – Aug 2025
Teflon Hub | Client: Nigerian Railway Corporation (NRC) | nrc-fane.ng

- **Designed the seat reservation countdown** with server-side re-validation before payment, closing a race condition that could let payment complete on an already-expired seat hold.
- **Built the Booking Control admin module end-to-end**, from API contract to UI, so that operations staff control booking windows and seat-hold timing without engineering help.
- **Shipped the audit logging interface** for admin configuration changes, including its API integration, plus filterable TanStack Table views for operational monitoring.

Full-Stack Engineer 2025 – Present
DataTechHub | Freelance Contract | datatech-rho.vercel.app

- **Built the entire frontend** for Nigeria's premier Data and AI learning platform: landing pages, authentication pages, user dashboard, and admin dashboard, with quizzes, assignments, lecture video, leaderboard, course curriculum, and timetable.
- **Worked with the backend team on API contracts** and integrated JWT-authenticated flows and data views (TanStack Query and Table) across every module.

SELECTED PROJECTS

StackedLayer (in development, pre-launch) | live preview | AI-powered UI component and app generator | Next.js, Node.js, Express, PostgreSQL, Python

- **Architected the Next.js frontend** and built core modules (dashboard generator, prompts, history, marketplace, landing pages) alongside teammates.
- **Built about 95% of the backend** (Node.js, Express): a provider-agnostic AI layer across Gemini, Groq, and Anthropic with caching and deduplication, an async generation pipeline on a job queue with Server-Sent Events for live job status, and a Python RAG service.

Digital Banking System | github | Node.js, Express.js, MongoDB, JWT, NIBSS API

- **Built a backend banking system** using the NIBSS API for KYC verification and interbank settlement, with bcrypt hashing and every transaction query scoped to the authenticated customer.

EDUCATION & CERTIFICATIONS

MSc Information Management, Ahmadu Bello University, Zaria, Nigeria — In progress
BSc Pure and Applied Mathematics, Niger Delta University, Bayelsa State, Nigeria — 2017 – 2022
Software Engineering Certificate, TS Academy — Nov 2025 – May 2026
